Continuation of 11. does NOT place the application in condition for allowance because: Applicant argued in substance that :

(1) " fails to disclose the step of requesting the monitoring device, by the first one of the plurality of target applications, through the interface , to send stored information reagarding monitored usage of the first one of the plurality of target applications to a first predetermined destination".

30. Examiner respectfully disagreed with Applicant's remarks:

As to the point (1), Knight teaches the notification event associated with the object is sent to the Monitor object...when a subsequent notification from the Iwindow object come in, the monitor object checks if the notification is to be tracked, that is , it check whether it corresponds to one of the sets of selected object and events included in monitor input file 13. If it does exist, the monitor, the monitor object writes predefined data including any annotations from monitor input file 13 to the monitor ouput file 21( col 8, In 18-23, In 25-32). When the monitor object receives the notification from the Iwindow, the monitor object cause the information sent to the monitor out file 21. Fontana teaches the monitored usage is stored in a monitor file 37( col 6, In 27-35) and Knight teaches the monitor receives the request from the Iwindow object to sent the stored imformation of the Iwindow object to a first predetermined destination. The information in the monitor input file is sent to the monitor ouput file is the imformation regarding to the Iwindow object( col 7, In 15-20/ In 34-40).
